EXPERIENCE

Gráfica Canastra

São José do Rio Preto, São Paulo

Full Stack Developer

June 2025 – Present

Working as a full-stack developer across multiple fronts of the internal ERP, I single-handedly developed from scratch to deployment the industrial maintenance module for company machinery, the first product of its kind in the organization, among other features and improvements.

Architecture & Performance

- Architected the Service Order (SO) module with a complete state machine (open → approved → in execution → paused → completed) and automated generation of new SOs from recurring maintenance plans via scheduled backend jobs, with a unified PATCH endpoint — **reducing API calls and simplifying code maintenance.**
- Designed and implemented **dozens of RESTful endpoints** using ASP.NET following Clean Architecture (Controller → Application → Repository), including validation, pagination, caching, and business logic with recursive functions.
- Refactored the backend to strengthen Clean Architecture, **reducing controllers by up to 60% (from ~230 to ~120 lines on average)**, isolating validations and business rules within the application layer.
- Identified and fixed redundant queries in a critical SO endpoint, reducing from 4 to 3 queries per request — **resulting in a ~40% drop in database time on the first call (56ms → 33ms).**

Integrations & Data

- Implemented upload, visualization, and deletion of SO photos via integration with **Azure Blob Storage**, structuring a generic and reusable integration module for other system areas.
- Integrated corporate system with N8N for report automation, creating an API exposed via public URL with token authentication — **eliminating the need for the manager to access the system directly.**
- Modeled relational databases (Firebird/IBExpert) and implemented business rules with recursive validations and foreign keys for new modules.

Frontend & Deployment

- Led the migration from React/Vite to Next.js, reducing technical debt and standardizing the internal ERP codebase with standalone build for Nginx deployment.
- Configured and maintained 3 environments (DEV, UAT, PRD) with Nginx, including **containerization with Docker/Docker Compose** to replicate environments locally.
- Implemented secure authentication with AuthGuard and GuestGuard, protecting application routes with token control via Redux and automatic redirection based on session state.
- Implemented React Query, custom hooks, and intelligent cache invalidation — **reduced code review issues from ~30 per PR to zero and cut bundle size of critical screens by up to 75% (e.g., 400kb → 100kb).**

Process & Quality

- Implemented automated tests (Jest on frontend, AAA pattern on backend) in critical modules and maintained technical documentation updated at each PR.
- Operated in a full agile workflow with Azure DevOps (tasks, story point estimation, PR with templates and mandatory approval) and configured GitHub Actions to automate publishing.

Bebedouros Cânovas

São José do Rio Preto, São Paulo

IT Department Supervisor

January 2024 – March 2025

- Participated in CRM and ERP implementations, assisting in database migration and team training.
- Managed IT infrastructure: Windows Server, VPNs, domains, DNS.

- Provided continuous technical support, ensuring system stability and minimizing downtime through proactive diagnosis and problem resolution.

RELEVANT PROJECTS

SmartBudget — Personal Financial Management / *In Production* / [Repository](#) / [Site](#)

- RESTful API in .NET 10 with Clean Architecture (DDD, Use Cases, Repository Pattern) and JWT authentication in HttpOnly cookies with refresh token rotation via Redis.
- Transaction management, customizable categories, and monthly budgets with real-time spending indicators to prevent budget overruns.
- Customizable dashboard with charts (Recharts), tables (TanStack Table), drag & drop, and report export in PDF/Excel.
- CI/CD pipeline with GitHub Actions, test coverage (xUnit, Jest, Playwright), SonarCloud quality gate, Snyk vulnerability scanning, and automated PR review via CodeRabbit.
- Stack: C#, .NET 10, PostgreSQL, Redis, Docker, Next.js, TypeScript, React Query, TailwindCSS, ShadCN UI.

SKILLS

Technical: TypeScript, JavaScript, React, Next.js (App Router, SSR, SSG), C#, ASP.NET Core, Entity Framework, SQL, Clean Architecture, SOLID, Redux, React Query, Zod, React Hook Form, TailwindCSS, PostgreSQL, Firebird, SQL Server, Docker, Docker Compose, Nginx, Azure DevOps, Azure Blob Storage, GitHub Actions, Git, Jest, N8N.

Languages: Intermediate/Advanced English (TOEIC 610 - B1) | Fluent technical reading.

EDUCATION

Fatec Rio Preto

São José do Rio Preto, São Paulo

Systems Analysis and Development

2024

Core Skills: Web Systems Development, Software Engineering, Database Management, Software Architecture, Computer Networks, and Object-Oriented Programming.

COURSES & CERTIFICATIONS

- Next.js from Zero to Advanced in Practice — 2025 [\[link\]](#)
- Essential ASP.NET Core Web API (.NET 8 / .NET 9) [\[link\]](#)
- Software Architecture & Modern System Design [\[link\]](#)
- TOEIC Certification — B1 (610 points) [\[link\]](#)
- AWS Academy Graduate – Cloud Foundations [\[link\]](#)
